How it works:

Our experts will evaluate and purchase your wellhead property, removing the inventory from your books. We will segregate scraps vs. usable materials, and we will negotiate with you the value of the usable property. All usable items we will be added to our Customer Property Portal (CPP), where you can access and assess your inventory 24/7, and you will be issued a credit based upon the negotiated value of your property.

Every time a valve or wellhead component is needed, we will provide a certified and repaired used component - meeting all API 6A requirements. We also guarantee a 1 year warranty of the product at a heavily discounted price, all with little lead time. Furthermore, we will apply an additional 10% discount to the bottom line of the applicable invoice, by taking the discount from your credit balance.

Let us help you save money by utilizing the property you already own. For more information on how you can take advantage of this offer and to see a live demonstration of our Customer Property Portal, contact your local UWS representative today.
